- Shrink wrap protects against weather damage.
- It's waterproof— it can fully encapsulate just about anything.
- One piece coverage. Cover entire flatbed loads and boats 60'+ boats with one piece!

COST EFFECTIVE:

- 100% virgin resin shrink wrap with maximum UV inhibitors costs only pennies per square foot.
- You can't afford NOT to shrink wrap your boat or RV.

NO SURFACE DAMAGE:

- When properly applied, shrink wrap will not move or chafe during transportation or storage unlike bulky, dirty tarps.

BREATHABILITY:

- Shrink wrap covers can be ventilated to eliminate moisture and mildew issues.
- Ask us about our Boat Size & Venting Chart to see the proper amount of vents for your boat shrink wrap cover
- We offer several countermeasures that inhibit moisture and mildew from forming on shrink wrapped units.

ACCESS INTO YOUR BOAT OR RV:

- Dr. Shrink has the widest selection of zipper access doors and solutions available on the market
- Gain entry to your covered boat or unit without cutting or removing your shrink wrap cover.
- Custom zipper access door solutions available to fit any job!

Manufacturers generate a slew of diverse products that come in all types of different shapes and sizes. For those producing large machinery, they face the challenge of properly storing and transporting the product without inflicting damage.

In working with Dr. Shrink, we can stock a complete line of American-made shrink wrap products capable of wrapping almost all objects. With premium shrink wrap available up to 60 feet wide, entire flatbed loads of machinery can be protected, making it impervious to damage from the elements.

Dr. Shrink only supplies premium 100% virgin resin shrink wrap featuring maximum UV inhibitors. This kind of quality ensures long-term usage and maximum protection.

HOW IT WORKS:

Shrink wrap is applied and shrunk using a propane fired heat tool; shrinking it tightly and fully encasing the piece of machinery.

SHRINK WRAP ADVANTAGE:

- Completely weatherproof
- No chafing
- Ventilation to eliminate moisture
- Zipper-access doors available
- Cost effective

Manufacturers want their products looking pristine and functioning correctly upon delivery. With all the hazards that come with the shipping process, shrink wrap minimizes the possibility of damage more effectively than other methods such as tarps.

Protecting your goods through shrink wrap is an investment. With the myriad ways something is capable of receiving damage during the storage and shipment process, protecting it is a matter of loss prevention. Protecting your product is protecting your reputation and business.

Volatile Corrosion Inhibiting Products Available:

Volatile Corrosion Inhibiting shrinkwrap protects both ferrous and non-ferrous metals and will not harm glass, plastic, or other parts of assemblies.

CONSTRUCTION SCAFFOLDING

MADE IN
AMERICA
QUALITY
ASSURED

A construction site can be a vulnerable place. Whether it's the construction of a new building or renovation/add-on to an existing one, there's the risk of weather eroding all the hard work or ceasing it for a long period of time. For example, water damage – whether it's rain entering the structure, melting snow, or leaks – is the second most frequent cause of loss during building projects.

Dr. Shrink stocks a complete line of premium, American-made shrink wrap products capable of wrapping large buildings and scaffolding. Our product shrinks "drum-tight" and is far more effective than traditional tarps and sheeting. This durable, weatherproof covering creates a proper enclosure and protects the project from potential damage.

Additionally, our shrink wrap creates an improved work environment. Our white shrink wrap allows natural, shadow-free lighting while blocking harmful UV rays. Worker downtime is reduced and the enclosure can even be heated and cooled.

HOW IT WORKS:

The shrink wrap is applied to scaffolding by lapping it over the top support cable. Heat weld it around the cable every 5-6 feet as it is being unfolded. Once unfolded and spot welded around the top, finish the top weld and perform the same operation on the bottom and sides. With all four sides secured, the shrinking process begins. Start at the bottom and work up using one continuous motion. Upon finishing, perform an inspection for holes and tears.

For buildings, an attachment system is placed around the entire base of the building. When the shrink wrap is draped over, it requires immediate attachment. Attach the shrink wrap along the base, pulling any looseness out of the material. Once secured, the entire wrap is heated and shrunk starting from the base and moving upward.

Training DVDs, instructions, and technical advice are available on how to properly and effectively apply the wrap. Dr. Shrink's staff offers assistance on all types of shrink wrap products.
